Inspector :  
James "Mikey" Lutes

Same Day Reports via  
email !

So its time to get a home inspection! If you need to get home owners insurance, this guide will walk you through the process. Wind Mitigation Inspections are required by most insurance companies to assess the wind mitigating features of your home. This form is required when you are shopping for new insurance or if you have been recently dropped and may help you save money!

Your inspector will be looking at the following:

- Roof
- Attic - ( if you have one )
- Windows & Doors
- Inspection duration: Approx. 30 minutes

Each system will be evaluated for age and condition, and documented with photographs in an approved form. This information will be provided to you in a PDF document and emailed to you and anyone else you desire.

The Inspector will need free and clear access to perform an accurate, quick and safe inspection.

(Please make sure the following areas are free and clear of debris and hazards)

- Attic access - ( if you have one )
- Windows & Doors

The inspector will be doing the following to meet the requirements of the report.

- Taking pictures of your home
- Going inside the attic - ( if you have one )
- Documenting your hurricane protection
- Collecting a digital signature
- Addressing any questions or concerns you may have
